

# TS5A23157 Dual 10-Ω SPDT Analog Switch

## 1 Features

- Low ON-State Resistance (15 Ω at 125°C)
- 125°C Operation
- Control Inputs are 5-V Tolerant
- Specified Break-Before-Make Switching
- Low Charge Injection
- Excellent ON-Resistance Matching
- Low Total Harmonic Distortion
- 1.8-V to 5.5-V Single-Supply Operation
- Latch-Up Performance Exceeds 100 mA Per JESD 78, Class II
- ESD Performance Tested Per JESD 22
  - 2000-V Human-Body Model (A114-B, Class II)
  - 1000-V Charged-Device Model (C101)

## 2 Applications

- Sample-and-Hold Circuits
- Battery-Powered Equipment
- Audio and Video Signal Routing
- Communication Circuits

## 3 Description

The TS5A23157 device is a dual single-pole double-throw (SPDT) analog switch designed to operate from 1.65 V to 5.5 V. This device can handle both digital and analog signals. Signals up to 5.5 V (peak) can be transmitted in either direction.

### Device Information<sup>(1)</sup>

PART NUMBER	PACKAGE	BODY SIZE (NOM)
TS5A23157DGS	VSSOP (10)	3.00 mm × 3.00 mm
TS5A23157RSE	UQFN (10)	2.00 mm × 1.50 mm

(1) For all available packages, see the orderable addendum at the end of the data sheet.

## 4 Revision History

NOTE: Page numbers for previous revisions may differ from page numbers in the current version.

Changes from Revision E (June 2015) to Revision F	Page
• Changed <i>Feature</i> From: Low ON-State Resistance (10 $\Omega$ ) To: Low ON-State Resistance (15 $\Omega$ at 125°C) .....	<b>1</b>
• Added <i>Feature</i> : 125°C Operation .....	<b>1</b>
• Added Junction Temperature To the <i>Absolute Maximum Ratings</i> table .....	<b>4</b>
• Changed the Operating temperature MAX value From: 85°C To: 125°C in the <i>Recommended Operating Conditions</i> table .....	<b>4</b>
• Changed the <i>Thermal Information</i> table .....	<b>4</b>
• Changed $r_{on}$ in the <i>Electrical Characteristics for 5-V Supply</i> table .....	<b>5</b>
• Changed $V_{IH}$ in the <i>Electrical Characteristics for 5-V Supply</i> table .....	<b>5</b>
• Changed $t_{ON}$ and $t_{OFF}$ in the <i>Electrical Characteristics for 5-V Supply</i> table .....	<b>5</b>
• Changed $r_{on}$ in the <i>Electrical Characteristics for 3.3-V Supply</i> table .....	<b>7</b>
• Changed $t_{ON}$ and $t_{OFF}$ in the <i>Electrical Characteristics for 3.3-V Supply</i> table .....	<b>7</b>
• Changed $r_{on}$ in the <i>Electrical Characteristics for 2.5-V Supply</i> table .....	<b>8</b>
• Changed $t_{ON}$ and $t_{OFF}$ in the <i>Electrical Characteristics for 2.5-V Supply</i> table .....	<b>8</b>
• Changed $r_{on}$ in the <i>Electrical Characteristics for 1.8-V Supply</i> table .....	<b>9</b>
• Changed $t_{ON}$ and $t_{OFF}$ in the <i>Electrical Characteristics for 1.8-V Supply</i> table .....	<b>9</b>

Changes from Revision D (October 2013) to Revision E	Page
• Added <i>Pin Configuration and Functions</i> section, <i>ESD Ratings</i> table, <i>Feature Description</i> section, <i>Device Functional Modes</i> , <i>Application and Implementation</i> section, <i>Power Supply Recommendations</i> section, <i>Layout</i> section, <i>Device and Documentation Support</i> section, and <i>Mechanical, Packaging, and Orderable Information</i> section .....	<b>1</b>

## 5 Pin Configuration and Functions

### Pin Functions

PIN		I/O	DESCRIPTION
NO.	NAME		
1	IN1	I	Select pin for switch 1
2	NO1	I/O	Normally open I/O for switch 1
3	GND	—	Ground
4	NO2	I/O	Normally open I/O for switch 2
5	IN2	I	Select pin for switch 2
6	COM2	I/O	Common I/O for switch 2
7	NC2	I/O	Normally closed I/O for switch 2
8	V+	—	Power supply pin
9	NC1	I/O	Normally closed I/O for switch 1
10	COM1	I/O	Common I/O for switch 1

## 6 Specifications

### 6.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted)<sup>(1)</sup>

			MIN	MAX	UNIT
V <sub>+</sub>	Supply voltage <sup>(2)</sup>		−0.5	6.5	V
V <sub>NC</sub> V <sub>NO</sub> V <sub>COM</sub>	Analog voltage <sup>(2)(3)(4)</sup>		−0.5	V <sub>+</sub> + 0.5	V
I <sub>I/OK</sub>	Analog port diode current	V <sub>NC</sub> , V <sub>NO</sub> , V <sub>COM</sub> < 0 or V <sub>NC</sub> , V <sub>NO</sub> , V <sub>COM</sub> > V <sub>+</sub>	±50		mA
I <sub>NC</sub> I <sub>NO</sub> I <sub>COM</sub>	On-state switch current	V <sub>NC</sub> , V <sub>NO</sub> , V <sub>COM</sub> = 0 to V <sub>+</sub>	±50		mA
V <sub>IN</sub>	Digital input voltage <sup>(2)(3)</sup>		−0.5	6.5	V
I <sub>IK</sub>	Digital input clamp current	V <sub>IN</sub> < 0	−50		mA
Continuous current through V <sub>+</sub> or GND			±100		mA
T <sub>J</sub>	Junction Temperature		150		°C
T <sub>stg</sub>	Storage temperature		−65	150	°C

- (1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions* is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) All voltages are with respect to ground, unless otherwise specified.
- (3) The input and output voltage ratings may be exceeded if the input and output clamp-current ratings are observed.
- (4) This value is limited to 5.5 V maximum.

### 6.2 ESD Ratings

		VALUE	UNIT
V <sub>(ESD)</sub>	Electrostatic discharge	Human body model (HBM), per ANSI/ESDA/JEDEC JS-001 <sup>(1)</sup>	±2000
		Charged-device model (CDM), per JEDEC specification JESD22-C101 <sup>(2)</sup>	±1000

- (1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.
- (2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

### 6.3 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)

		MIN	MAX	UNIT
V <sub>I/O</sub>	Switch input/output voltage	0	V <sub>+</sub>	V
V <sub>+</sub>	Supply voltage	1.65	5.5	V
V <sub>I</sub>	Control input voltage	0	5.5	V
T <sub>A</sub>	Operating temperature	−40	125	°C

### 6.4 Thermal Information

THERMAL METRIC <sup>(1)</sup>		TS5A23157		UNIT
		DGS (VSSOP)	RSE (UQFN)	
		10 PINS	10 PINS	
R <sub>θJA</sub>	Junction-to-ambient thermal resistance	210.5	215.4	°C/W
R <sub>θJCTop</sub>	Junction-to-case (top) thermal resistance	99.1	140.2	°C/W
R <sub>θJB</sub>	Junction-to-board thermal resistance	132.4	137.9	°C/W
ψ <sub>JT</sub>	Junction-to-top characterization parameter	29.1	13.7	°C/W
ψ <sub>JB</sub>	Junction-to-board characterization parameter	130.5	137.6	°C/W

- (1) For more information about traditional and new thermal metrics, see the [Semiconductor and IC Package Thermal Metrics](#) application report.

## 6.5 Electrical Characteristics for 5-V Supply

 $V_+ = 4.5 \text{ V to } 5.5 \text{ V}$ ,  $T_A = -40^\circ\text{C to } 85^\circ\text{C}$  (unless otherwise noted)

PARAMETER	TEST CONDITIONS	$T_A$	$V_+$	MIN	TYP <sup>(1)</sup>	MAX	UNIT
<b>ANALOG SWITCH</b>							
$V_{COM}, V_{NO}, V_{NC}$ Analog signal range				0		$V_+$	V
$r_{on}$ ON-state resistance	$0 \leq V_{NO} \text{ or } V_{NC} \leq V_+$ , $I_{COM} = -30 \text{ mA}$ , Switch ON, see <a href="#">Figure 9</a>	Full -40 to 125°C	4.5 V			10 15	$\Omega$
$\Delta r_{on}$ ON-state resistance match between channels	$V_{NO} \text{ or } V_{NC} = 3.15 \text{ V}$ , $I_{COM} = -30 \text{ mA}$ , Switch ON, see <a href="#">Figure 9</a>	25°C	4.5 V		0.15		$\Omega$
$r_{on(Flat)}$ ON-state resistance flatness	$0 \leq V_{NO} \text{ or } V_{NC} \leq V_+$ , $I_{COM} = -30 \text{ mA}$ , Switch ON, see <a href="#">Figure 9</a>	25°C	4.5 V		4		$\Omega$

## 8 Detailed Description

### 8.1 Overview

The TS5A23157 is a dual single-pole-double-throw (SPDT) solid-state analog switch. The TS5A23157, like all analog switches, is bidirectional. When powered on, each COM pin is connected to its respective NC pin when the IN pin is low. For this device, NC stands for *normally closed* and NO stands for *normally open*. If IN is low, COM is connected to NC. If IN is high, COM is connected to NO.

The TS5A23157 is a break-before-make switch. This means that during switching, a connection is broken before a new connection is established. The NC and NO pins are never connected to each other.

### 8.2 Functional Block Diagram

### 8.3 Feature Description

The low ON-state resistance, ON-state resistance matching, and charge injection in the TS5A23157 make this switch an excellent choice for analog signals that require minimal distortion. In addition, the low THD allows audio signals to be preserved more clearly as they pass through the device.

The 1.65-V to 5.5-V operation allows compatibility with more logic levels, and the bidirectional I/Os can pass analog signals from 0 V to  $V_+$  with low distortion. The control inputs are 5-V tolerant, allowing control signals to be present without  $V_{CC}$ .

### 8.4 Device Functional Modes

Table 1 lists the functional modes for TS5A23157.

**Table 1. Function Table**

IN	NC TO COM, COM TO NC	NO TO COM, COM TO NO
L	ON	OFF
H	OFF	ON

## 9 Application and Implementation

### NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

### 9.1 Application Information

The TS5A3157 can be used in a variety of customer systems. The TS5A3157 can be used anywhere multiple analog or digital signals must be selected to pass across a single line.

### 9.2 Typical Application

**Figure 19. System Schematic for TS5A23157**

#### 9.2.1 Design Requirements

In this particular application,  $V_+$  was 5 V, although  $V_+$  is allowed to be any voltage specified in [Recommended Operating Conditions](#). A decoupling capacitor is recommended on the  $V_+$  pin. See [Power Supply Recommendations](#) for more details.

#### 9.2.2 Detailed Design Procedure

In this application, IN is, by default, pulled low to GND. Choose the resistor size based on the current driving strength of the GPIO, the desired power consumption, and the switching frequency (if applicable). If the GPIO is open-drain, use pullup resistors instead.

## Typical Application (continued)

### 9.2.3 Application Curve

**Figure 20. Power-Supply Current vs Temperature ( $V_+ = 5\text{ V}$ )**

## 10 Power Supply Recommendations

The power supply can be any voltage between the minimum and maximum supply voltage rating located in the [Recommended Operating Conditions](#).

Each  $V_{CC}$  terminal should have a good bypass capacitor to prevent power disturbance. For devices with a single supply, a 0.1- $\mu\text{F}$  bypass capacitor is recommended. If there are multiple pins labeled  $V_{CC}$ , then a 0.01- $\mu\text{F}$  or 0.022- $\mu\text{F}$  capacitor is recommended for each  $V_{CC}$  because the  $V_{CC}$  pins will be tied together internally. For devices with dual supply pins operating at different voltages, for example  $V_{CC}$  and  $V_{DD}$ , a 0.1- $\mu\text{F}$  bypass capacitor is recommended for each supply pin. It is acceptable to parallel multiple bypass capacitors to reject different frequencies of noise. 0.1- $\mu\text{F}$  and 1- $\mu\text{F}$  capacitors are commonly used in parallel. The bypass capacitor should be installed as close to the power terminal as possible for best results.

## 11 Layout

### 11.1 Layout Guidelines

Reflections and matching are closely related to loop antenna theory, but different enough to warrant their own discussion. When a PCB trace turns a corner at a 90° angle, a reflection can occur. This is primarily due to the change of width of the trace. At the apex of the turn, the trace width is increased to 1.414 times its width. This upsets the transmission line characteristics, especially the distributed capacitance and self-inductance of the trace — resulting in the reflection. It is a given that not all PCB traces can be straight, and so they will have to turn corners. Below figure shows progressively better techniques of rounding corners. Only the last example maintains constant trace width and minimizes reflections.

Unused switch I/Os, such as NO, NC, and COM, can be left floating or tied to GND. However, the IN pin must be driven high or low. Due to partial transistor turnon when control inputs are at threshold levels, floating control inputs can cause increased  $I_{CC}$  or unknown switch selection states.

### 11.2 Layout Example

**Figure 21. Trace Example**

## 12 Device and Documentation Support

### 12.1 Device Support

#### 12.1.1 Device Nomenclature

**Table 2. Parameter Description**

SYMBOL	DESCRIPTION
$V_{COM}$	Voltage at COM
$V_{NC}$	Voltage at NC
$V_{NO}$	Voltage at NO
$r_{on}$	Resistance between COM and NC or COM and NO ports when the channel is ON
$\Delta r_{on}$	Difference of $r_{on}$ between channels
$r_{on(Flat)}$	Difference between the maximum and minimum value of $r_{on}$ in a channel over the specified range of conditions
$I_{NC(OFF)}$	Leakage current measured at the NC port, with the corresponding channel (NC to COM) in the OFF state under worst-case input and output conditions
$I_{NO(OFF)}$	Leakage current measured at the NO port, with the corresponding channel (NO to COM) in the OFF state under worst-case input and output conditions
$I_{NC(ON)}$	Leakage current measured at the NC port, with the corresponding channel (NC to COM) in the ON state and the output (COM) being open
$I_{NO(ON)}$	Leakage current measured at the NO port, with the corresponding channel (NO to COM) in the ON state and the output (COM) being open
$I_{COM(ON)}$	Leakage current measured at the COM port, with the corresponding channel (NO to COM or NC to COM) in the ON state and the output (NC or NO) being open
$V_{IH}$	Minimum input voltage for logic high for the control input (IN)
$V_{IL}$	Minimum input voltage for logic low for the control input (IN)
$V_{IN}$	Voltage at IN
$I_{IH}, I_{IL}$	Leakage current measured at IN
$t_{ON}$	Turnon time for the switch. This parameter is measured under the specified range of conditions and by the propagation delay between the digital control (IN) signal and analog outputs (COM/NC/NO) signal when the switch is turning ON.
$t_{OFF}$	Turnoff time for the switch. This parameter is measured under the specified range of conditions and by the propagation delay between the digital control (IN) signal and analog outputs (COM/NC/NO) signal when the switch is turning OFF.
$t_{BBM}$	Break-before-make time. This parameter is measured under the specified range of conditions and by the propagation delay between the output of two adjacent analog channels (NC and NO) when the control signal changes state.
$Q_C$	Charge injection is a measurement of unwanted signal coupling from the control (IN) input to the analog (NC, NO, or COM) output. This is measured in coulombs (C) and measured by the total charge induced due to switching of the control input. Charge injection, $Q_C = C_L \times \Delta V_O$ , $C_L$ is the load capacitance and $\Delta V_O$ is the change in analog output voltage.
$C_{NC(OFF)}$	Capacitance at the NC port when the corresponding channel (NC to COM) is OFF
$C_{NO(OFF)}$	Capacitance at the NO port when the corresponding channel (NC to COM) is OFF
$C_{NC(ON)}$	Capacitance at the NC port when the corresponding channel (NC to COM) is ON
$C_{NO(ON)}$	Capacitance at the NO port when the corresponding channel (NC to COM) is ON
$C_{COM(ON)}$	Capacitance at the COM port when the corresponding channel (COM to NC or COM to NO) is ON
$C_{IN}$	Capacitance of IN
$O_{ISO}$	OFF isolation of the switch is a measurement of OFF-state switch impedance. This is measured in dB in a specific frequency, with the corresponding channel (NC to COM or NO to COM) in the OFF state. OFF isolation, $O_{ISO} = 20 \log (V_{NC}/V_{COM})$ dB, $V_{COM}$ is the input and $V_{NC}$ is the output.
$X_{TALK}$	Crosstalk is a measurement of unwanted signal coupling from an ON channel to an OFF channel (NC to NO or NO to NC). This is measured at a specific frequency and in dB. Crosstalk, $X_{TALK} = 20 \log (V_{NC1}/V_{NO1})$ , $V_{NO1}$ is the input and $V_{NC1}$ is the output.
BW	Bandwidth of the switch. This is the frequency where the gain of an ON channel is –3 dB below the dc gain. Gain is measured from the equation, $20 \log (V_{NC}/V_{COM})$ dB, where $V_{NC}$ is the output and $V_{COM}$ is the input.
$I_+$	Static power-supply current with the control (IN) pin at $V_+$ or GND
$\Delta I_+$	This is the increase in $I_+$ for each control (IN) input that is at the specified voltage, rather than at $V_+$ or GND.

**Table 3. Summary of Characteristics**

CONFIGURATION	2:1 MULTIPLEXER/DEMULTIPLEXER (2 × SPDT)
Number of channels	2
ON-state resistance ( $r_{on}$ )	10 $\Omega$
ON-state resistance match between channels ( $\Delta r_{on}$ )	0.15 $\Omega$
ON-state resistance flatness ( $r_{on(flat)}$ )	4 $\Omega$
Turnon/turnoff time ( $t_{ON}/t_{OFF}$ )	5.7 ns/3.8 ns
Break-before-make time ( $t_{BBM}$ )	0.5 ns
Charge injection ( $Q_C$ )	7 pC
Bandwidth (BW)	220 MHz
OFF isolation ( $O_{SIO}$ )	–65 dB at 10 MHz
Crosstalk 9XTALK)	–66 dB at 10 MHz
Total harmonic distortion (THD)	0.01%
Leakage current ( $I_{COM(OFF)}/I_{NC(OFF)}$ )	$\pm 1$ $\mu$ A
Package options	10-pin DGS and RSE

(1) The marketing status values are defined as follows:

**ACTIVE:** Product device recommended for new designs.

**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.

**OBSOLETE:** TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

**RoHS Exempt:** TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

**Green:** TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

**Important Information and Disclaimer:** The information provided on this page represents TI's knowledge and belief as of the date that it is provided.   - D. Customers should contact their board fabrication site for minimum solder mask web tolerances between signal pads.
  - E. Maximum stencil thickness 0,127 mm (5 mils). All linear dimensions are in millimeters.
  - F. Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Refer to IPC 7525 for stencil design considerations.
  - G. Side aperture dimensions over-print land for acceptable area ratio > 0.66. Customer may reduce side aperture dimensions if stencil manufacturing process allows for sufficient release at smaller opening.

## IMPORTANT NOTICE AND DISCLAIMER

TI PROVIDES TECHNICAL AND RELIABILITY DATA (INCLUDING DATASHEETS), DESIGN RESOURCES (INCLUDING REFERENCE DESIGNS), APPLICATION OR OTHER DESIGN ADVICE, WEB TOOLS, SAFETY INFORMATION, AND OTHER RESOURCES "AS IS" AND WITH ALL FAULTS, AND DISCLAIMS ALL WARRANTIES, EXPRESS AND IMPLIED, INCLUDING WITHOUT LIMITATION ANY IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE OR NON-INFRINGEMENT OF THIRD PARTY INTELLECTUAL PROPERTY RIGHTS.

These resources are intended for skilled developers designing with TI products. You are solely responsible for (1) selecting the appropriate TI products for your application, (2) designing, validating and testing your application, and (3) ensuring your application meets applicable standards, and any other safety, security, or other requirements. These resources are subject to change without notice. TI grants you permission to use these resources only for development of an application that uses the TI products described in the resource. Other reproduction and display of these resources is prohibited. No license is granted to any other TI intellectual property right or to any third party intellectual property right. TI disclaims responsibility for, and you will fully indemnify TI and its representatives against, any claims, damages, costs, losses, and liabilities arising out of your use of these resources.

TI's products are provided subject to TI's Terms of Sale ([www.ti.com/legal/termsofsale.html](http://www.ti.com/legal/termsofsale.html)) or other applicable terms available either on [ti.com](http://ti.com) or provided in conjunction with such TI products. TI's provision of these resources does not expand or otherwise alter TI's applicable warranties or warranty disclaimers for TI products.
